Welcame to KFC White Paper

KFC Coin

1. Abstract

In this bustling of life, everyone needs different entertainment areas to make life spend easier.
On the other hand, the cryptocurrency is very interesting not only in terms of blockchain technology but also making income for everyone.
Therefore, we decide to combine these things together and we generate KFC coin to satisfy all.

2. Introduction KFC coin

KFC coin is a standard ERC-20 token and based on ETH network. Ethereum smart contracts execute the financial transfers of KFC Coin and all sub-tokens. They are driven by all events from the KFC Coin and all sub-tokens.
KFC is also supported by a lot of wallets such as: MetaMask, Trust Wallet, MEW wallet, Enjin wallet,… Therefore, people can manage their assets easily with only one interface. Our plan is making KFC become a central token with many other sub-tokens. Each sub-token will be used on specific decentralized application (Dapp). And KFC will become the main token that generate all sub-tokens through staking KFC progress.
These things will make our KFC Ecosystem bigger day by day without any inflation,
 more secure and fast.

And we also need a large amount of KFC for all passions we aim:
• Payment method.
• Trading on Exchange.
• Game Dapp, Entertainment Dapp.
• Exchange platform

What is Ethereum?
Ethereum is a global, decentralized, encrypted peer-to-peer (P2P) computing platform. Its network enables you to run decentralized applications (DAPPs), employ smart contracts, integrate into a payment
network and access its open ledger (blockchain).

What is KFC coin?
KFC coin is a peer-to-peer digital currency and an open-source project. KFC coin creation and transfer is based on an open-source protocol and is not controlled by a central authority. KFC coin started in 1 April 2020, Developed at Ethereum platform.

By joining the Ethereum network, KFC coin can access smart contracts technology and second-layer software, as well as decentralized application developments. KFC coin is a straight forward, utility token,
with its community and user base.

What is ERC20 Token?
ERC20 is the Ethereum token standard which is used for Ethereum smart contracts. Developed in 2015, ERC-20 defines a common list of rules that an Ethereum token has to implement, giving developers the ability to program how new tokens will function within the Ethereum ecosystem. KFC coin will also be developed on the Ethereum blockchain.

ERC-20 tokens are tokens designed and used solely on the Ethereum platform. They follow a list of standards so that they can be shared, exchanged for other tokens, or transferred to a crypto-wallet. KFC coin is a full ERC20 token on the Ethereum blockchain.

This means that it can be used in smart contracts and potentially with all other extensions and future development of the Ethereum platform. Not only does this make our development more efficient, but it also offers the our KFC coin community access to the combined new developments on the Ethereum blockchain, its programming language and second layer applications that helps put distributed ledger technology into the mainstream.

Having KFC coin as part of the Ethereum ecosystem will make it easier for third parties to integrate KFC coin into their systems. Examples of such third parties include exchanges, wallet creators, payment solutions providers, and so on.

With no central point of failure and secured using cryptography, applications are well protected against hacking attacks and fraudulent activities.

The KFC coin

The KFC coin as the main trading token of the KFC Infrastructure. It will be utilized for fund raising and will also offer a utility derived from rewards and staking.

Our Vision

At KFC World, we envision to bring together services and products that enriches the mind, body and soul, allowing users to celebrate life and rejuvenate from the grind of daily life.

Our Mission
Our mission is to bring together world-class vendors and merchants that cater to that vision into KFC Marketplace.

KFC Coin

KFC coin details

Name	:	KFC coin
Symbol	:	KFC
platform	:	Ethereum
Type	:	Erc-20
Supply	:	1,000,000,000
Dacimals	:	18

Contact address :0xf20EC7e0c93FC4E41209b27601eF5d3927af5447

Token Allocation Forecast

Distribution

Token Sale program: 60%
Reserve Fund : 8%
Team And Founders: 15%
Board Advisors: 4%
Marketing and Bounti: 6%
Ecosysten Develoment:7%

Funding Allocation

Product Develoment: 40%
Business Develoment: 12%
Marketing : 20%
Legal and Regulation:10%
Partner/Investor: 6%
Operational: 8%
Contingency: 4%

KFC Coin

KFC coin Wallets:

KFC coin can be kept, stored, spent, by using popular ERC20 wallets, like, Mist, MEW, Atomic or MetaMask, wallets that offer support for KFCcoin

Users can now select the wallet of their choice and enhance its usability and allow storage on cold wallet solutions, like Ledger or Trezor, or other similar devices, to keep their KFC coins and other ERC20 tokens safe and secure.

Due to the wide availability of Ethereum wallets for mobile devices and tablets, payments, trading, and transfer of KFC coins are getting easier and more available for both entrepreneurs and consumers. Technical Specifications

KFC coin Contract Address:
